# OUTLINE

---

- Executive Summary
- Introduction
- Methodology
- Results
  - Visualization – Charts
  - Dashboard
- Discussion
  - Findings & Implications
- Conclusion
- Appendix

# EXECUTIVE SUMMARY

---

- This project is a comprehensive analysis of Stack Overflow survey of 2024.
- It includes the Deep analysis of:
  - Technologies/platform people have worked with like language/ Database
  - Technologies/platform people want to work with in future like language/ Database
  - The type of respondent and their country.
- It also include the JobType like majority of doing remote/ hybrid
- Their age and choices with coding profession
- The future Job market skills

# INTRODUCTION

---

## 1. Purpose

To analyze the 2024 Stack Overflow Developer Survey and identify technology trends, workforce patterns, and future skill demands in the global developer community.

- 2. Target Audience

People who want to get into coding profession

- 3. Value proposition

This Data gives insight and actionable steps to understand the future of coding language and technology.

- 4. Scopes of Analysis

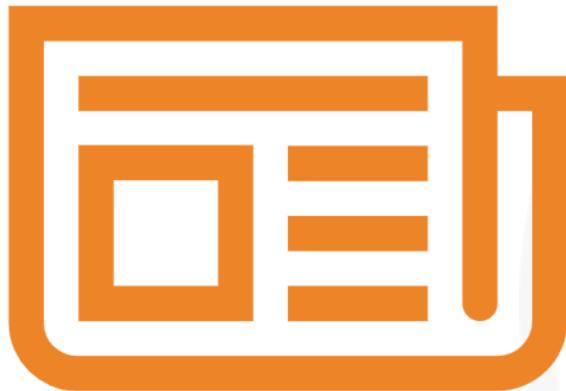

- Point 1: Technology Landscape: Current & future programming languages and databases

- Point 2: Geographic distribution, age groups, work arrangements, and job market dynamics

# METHODOLOGY

---

- Point1 : Data Source

Stack Overflow Developer Survey 2024, 70,000+ respondents,  
Global coverage

- Point2 : Data Collection

The data is a secondary data form the stack overflow annual survey covering technology usage, demographics, and work preferences

- Point3: Data Cleaning

Removing nulls, Duplicate and Outlier

- Point4: Analysis Approach

- Sub Point1 : Statistical analysis

Descriptive statistics and frequency distributions

Trend analysis (current vs. future technology demand)

- Sub Point2: Visualization

Using matplotlib visuals to analyze trends

Detecting outlier

# RESULTS

---

The result for the Analysis of this survey is:

- Languages like JavaScript/TypeScript, Python are high demand skills and is very employable if you start your tech career
- Having multiple Knowledge of language, database and technologies opens many opportunity
- Learning SQL Database is still relevant and profitable
- You Don't necessary need a master Degree a lot of respondent got their job with just Bachelor degree.
- Learning MongoDB is a good idea for students as many companies are moving to NoSQL databases
- Amazon Web Services (AWS) is the most popular cloud platform (2,391 users)
- Python is the future growing language for the Data career
- Majority of developers are aged 25-34 years (41.3%)
- The survey was taken globally most user's from Canada, US.

# PROGRAMMING LANGUAGE TRENDS

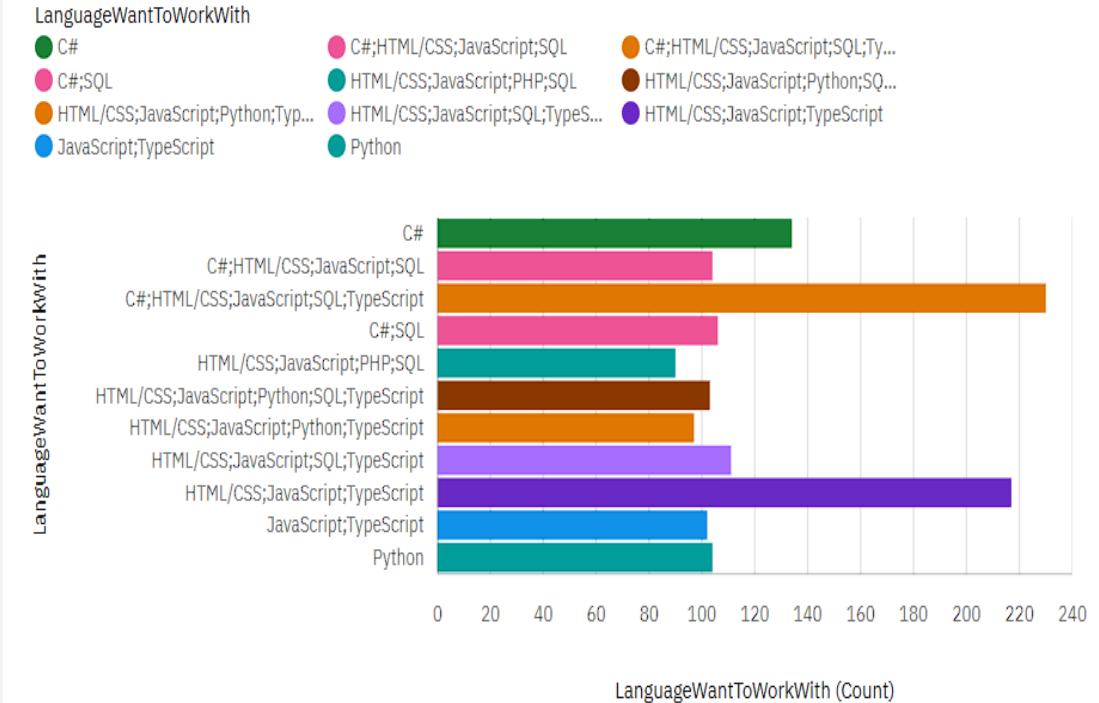

## Current Year

## Next Year

Top 10 LanguageWantWorkWith

# PROGRAMMING LANGUAGE TRENDS - FINDINGS & IMPLICATIONS

---

## Findings

- JavaScript and TypeScript are the most used languages, appearing in almost all top 10 combinations
- Python is becoming more popular, more people want to learn it than currently use it
- Developers prefer knowing multiple languages together rather than just one language

## Implications

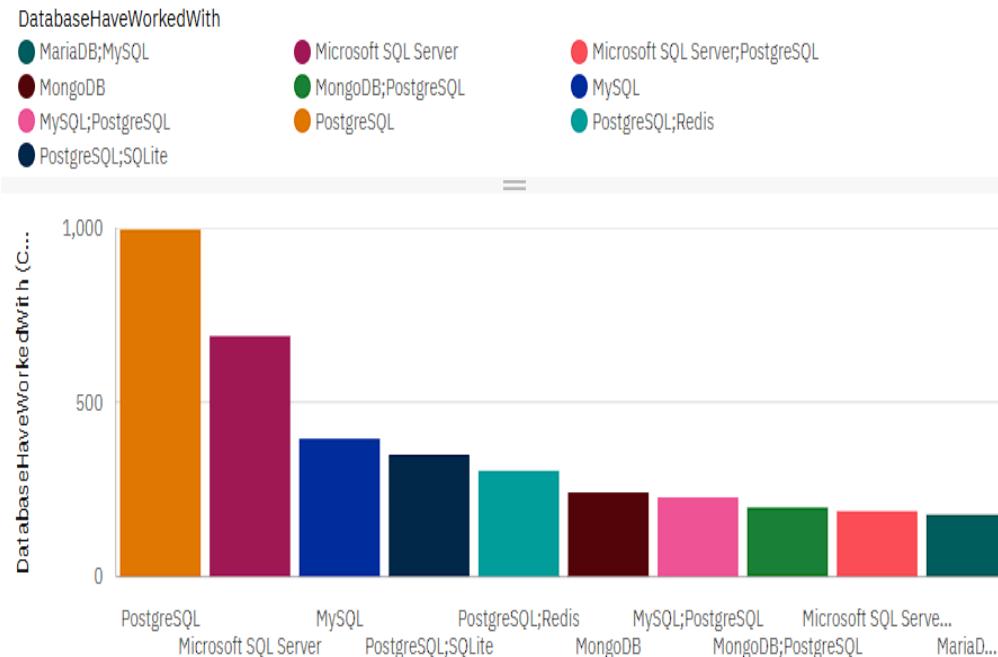

- If you want a job easily, learn JavaScript and TypeScript first as most companies need these skills
- Python is a safe choice for future because demand is increasing especially for data science and AI work
- Companies using only old languages like C# might struggle to hire new developers soon

# DATABASE TRENDS

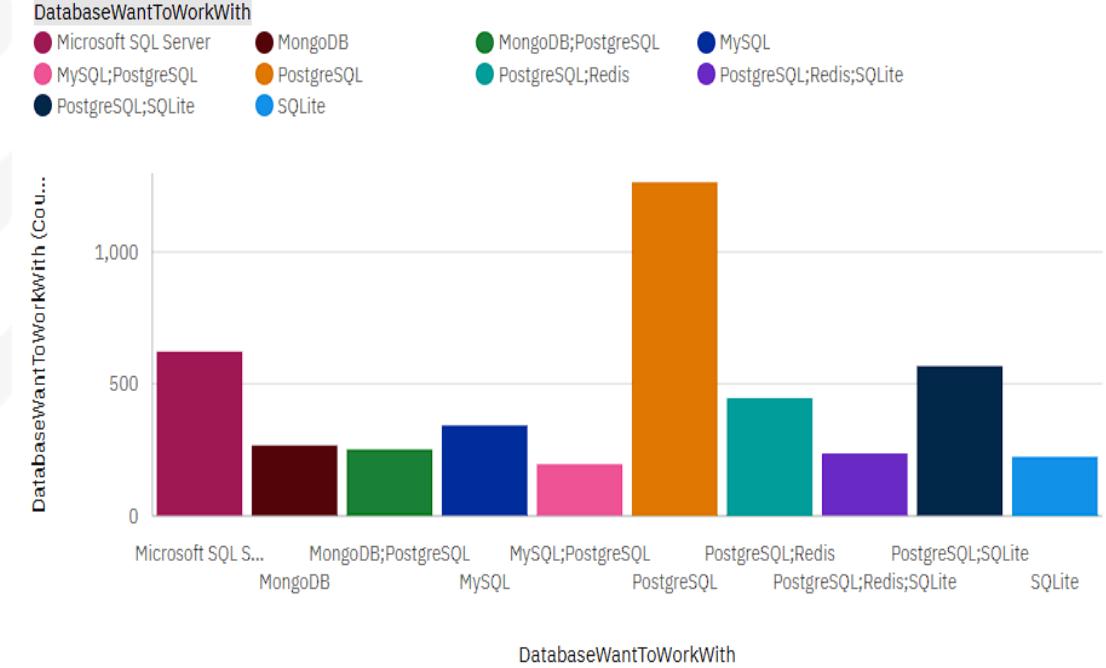

## Current Year

Top 10 DatabaseHaveWorkedWith

## Next Year

Top 10 DatabaseWantWorkWith

# DATABASE TRENDS - FINDINGS & IMPLICATIONS

---

## Findings

- PostgreSQL is the most popular database with 1,000+ developers using it now and wanting to use it in future
- MongoDB is growing fast as more developers want to learn and work with NoSQL databases
- Most developers still prefer SQL databases (PostgreSQL, MySQL, MS SQL Server) over other types

## Implications

- Companies should use PostgreSQL because it's easier to find developers who know it
- Learning MongoDB is a good idea for students as many companies are moving to NoSQL databases
- If you're using old Microsoft SQL Server, it might be hard to find new developers in the future

# DISCUSSION

---

- ***Current tech:***

**JavaScript, HTML/CSS, and TypeScript** get most in the top 10 languages

**Postgres** is the most used database from the top 10 database

**Amazon Web Services (AWS)** is the most popular cloud platform (2,391 users)

- ***Future Tech:***

Strong interest Continues in **JavaScript/TypeScript and Python**

**PostgreSQL** maintains its position with mongo DB getting attention

**AWS** remains the preferred Cloud platform

- ***Demographics***

Majority of developers are **aged 25-34 years (41.3%)**

Majority of Developers have only **Bachelor's Degree**

# OVERALL FINDINGS & IMPLICATIONS

---

## Findings

- JavaScript/TypeScript and PostgreSQL are the clear winners in both current usage and future demand across the industry
- Most developers are young (25-34 years old) with Bachelor's degrees, showing tech field attracts educated early-career professionals
- AWS dominates cloud platforms and developers prefer working with multiple technologies together rather than specializing in one

## Implications

- Students should focus on learning JavaScript, TypeScript, Python and PostgreSQL to get jobs easily in the market
- Companies need to offer competitive packages for young talented developers since most are in their prime working year
- Learning cloud platforms like AWS along with full-stack development gives better career opportunities than single skill focus

# CONCLUSION

---

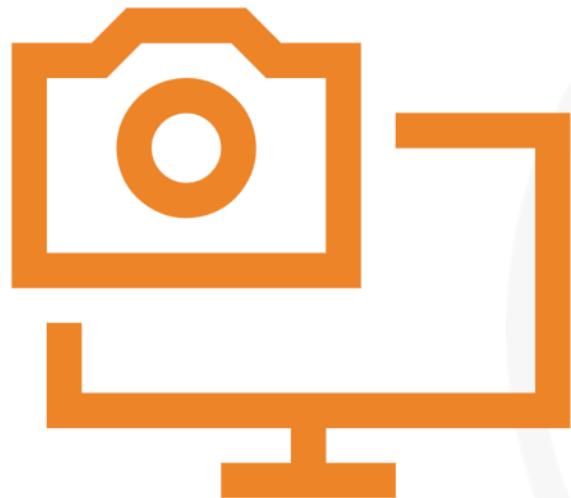

- JavaScript/TypeScript are must learn language if you want to get job in software industry
- Python is the future growing language for the Data career
- Postgres has always been relevant and it's must learn skill for database and tech industry
- Focusing on one single language can be difficult to get a job so have multiple skill knowledge is becoming necessary
